

Medication & Your Dog:

What's Missing from the Conversation?

CHECK FOR INVISIBLE PAIN

Gut issues, allergies, nerve pain — these can mimic anxiety

TRACK BEHAVIOURS FOR 4-6 WEEKS

Data reveals patterns, not guesswork. Don't know what to track? More to follow.

PARTNER WITH YOUR VET

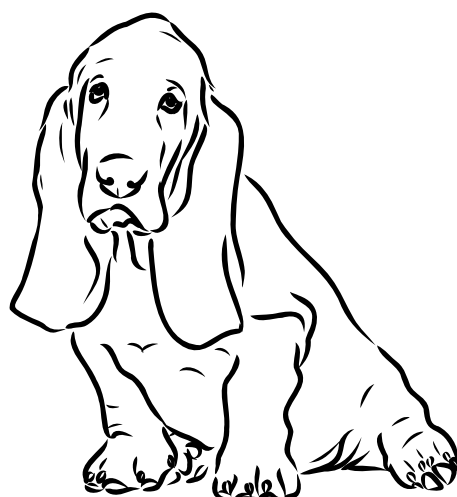

Present clear data:

1. "My dog has had X biting attempts in Y weeks."
2. "I've been working with a behaviourist for x-weeks and this is the progress ..."

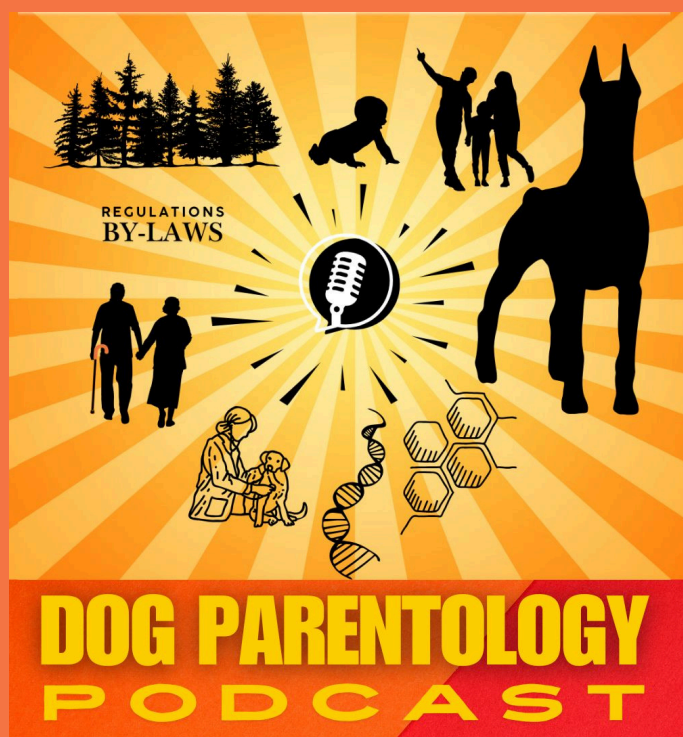

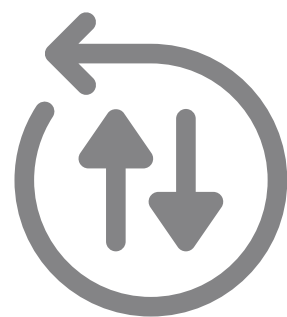

CONSIDER MEDICATION AS A TOOL, NOT A FIX

Stabilisation creates space for learning and recovery.

REVIEW, ADJUST, REASSESS

Medication needs ongoing assessment — it's never 'one size fits all'

Curious if medication is the right choice for your dog? Tune in for a powerful conversation that breaks down what's missing from medication decisions — and how to make the best choice for your dog.
